

SWARUP PATIL

patilswarup110@gmail.com | +919284669384 | github.com/swarupio | linkedin.com/swarup-patil

EDUCATION

Don Bosco Institute of Technology (DBIT) | Mumbai, Maharashtra

B.E. in Computer Engineering

Expected Graduation: May 2028

- Coursework: Data Structures & Algorithms, OOP, DBMS, Computer Networks, Theory of Computation.

TECHNICAL SKILLS

- Languages: TypeScript, JavaScript, JAVA (DSA Focus), Python, SQL
- Frameworks & Tools: React.js, Next.js, Node.js, Express.js, Tailwind, Vite, Git/GitHub
- Databases & Cloud: PostgreSQL, Supabase (BaaS), MongoDB, REST APIs

OPEN SOURCE EXPERIENCE

Open Source Contributor | GirlScript Summer of Code (GSSoC) '26

May 2026 - August 2026

- Achieved Global Rank 113 (Top 1%) out of 43,587 participants; successfully merged 95 Pull Requests across 10 diverse open-source projects.
- Engineered critical API modifications, resolving JSON array parsing conflicts and implementing rate-limit spoofing protections via X-Real-IP middleware.
- Developed multi-tenant organization models, canonical URL routing overrides, and error boundary logic.

Profile Link : gssoc.org/swarup

TECHNICAL PROJECTS

SocioSquad – Community Engagement Platform | Next.js, TypeScript, Supabase, PostgreSQL

- Architected scalable end-to-end user registration flows and secure backend database logic.
- Engineered relational schemas and optimized querying using PostgreSQL for real-time data handling.
- Developed responsive, component-driven UI utilizing strict TypeScript interfaces to ensure type safety.

Splitr – Algorithmic Expense Distribution App | React, Vite, TypeScript

- Developed an interactive finance utility that computes complex debt simplification algorithms among multi-user groups.
- Optimized front-end state management using Vite, drastically reducing component re-render overhead for rapid UI responsiveness.

LEADERSHIP & EXPERIENCES

Google Developer Groups (GDGC) on Campus | Assistant DSA Expert

- Managed curriculum and mentored 100+ students in breaking down complex algorithmic paradigms (Dynamic Programming, Graph Analytics).

ACM Student Chapter | Technical Team Member

- Won 1st Place in a premier Web Development Hackathon via rapid application prototyping and system design under strict time constraints.

ALGORITHMIC PROBLEM SOLVING

leetcode.com/swarup

- LeetCode: Solved 250+ algorithmic challenges (including 121 Medium/Hard problems) with 570+ annual submissions
- Core Focus: Specialized in optimizing time and space complexity across array transformations, complex string matching, and advanced backtracking algorithms.
